

## For highest hygienic requirements – the minimal dead space safety relief valve

The safety relief valves type 33503 and 33603 in hygienic design are specialized for processes with high requirements to cleanability. These valves are available in sizes DN 40 – DN 80. They are characterized by their minimal dead space construction of the inlet area. In general, they are used in the brewing-, beverage- and food industries.

### Your benefit:

- Simplified cleaning of the minimal dead space safety relief valve seat
- Optimized construction acc. to the requirements of Hygienic Design
- Particular suitability for the installation in a top flange → elimination of the CIP bypasses

### Optional:

- Pneumatic lifting device
- Proximity switch for indication „valve open“

Take benefit from more than 140 years of experience in the manufacture of valves and fittings. We look forward to receiving your inquiry.
