Minced meat line solutions with optional HCU software:

## Handtmann and Bizerba for maximum portioning accuracy.

For highly economical production of minced meat, Handtmann provides two line solutions that generate new potentials for cost reduction with the greatest portioning accuracy.

### Version Basic:

The basic-version comprises a VF 600 vacuum filler with GD 93-3/6 inline grinding system, a GMD 99-2 minced meat portioner and the Bizerba CWP Neptune scales.

- 100% full control thanks to reference weighing of every individual portion.
- Direct communication of the continuous-flow scales with the Handtmann vacuum filler.
- Integrated ejector to eject underweight portions before labelling.
- Sustained cost reduction due to reduction of safety overfilling.

### Version Process Control:

In addition to the basic version, the high-end version allows central linking of an unlimited number of minced meat line solutions with Bizerba Neptune scales via the Handtmann HCU software.

- Central, easy item maintenance only on PC via HCU software.
- Central and automatic control, documentation and monitoring of multiple portioning lines via HCU software.
- Automatic start of the line by loading the item at the filler.
- Easy installation as no additional parameterisation at the scales is required.
- Optimised weight control ensures fewer rejects at the start.
- Maximum cost-effectiveness, optimised productivity and reduced labour costs thanks to centralised automated control of all processes.

Easy control for maximum portioning accuracy and 100% transparency.
